

Figma step-by-step from the basics - how to create a complete UI design

1. Create a Figma account

- Go to [Figma](#)
- Sign up or log in.
- Select **Design** → **New design file**.

2. Understand the Figma interface

Area	Purpose
Toolbar	Select, frame, shapes, pen, text, etc.
Layers panel	Shows all objects in your design
Canvas	Main area where you design
Design panel	Size, position, colors, borders, effects
Prototype	Connect screens and create interactions
Assets	Components and reusable elements

3. Create your first Frame

- Press **F**
- Select **Phone** from the right panel.
- Choose something like **iPhone 14/15**.
- Rename the frame: Login Screen.

4. Add a background

- Select the frame.
- In the right panel, find **Fill**.
- Choose a color or enter a HEX value such as #F5F7FA.

5. Add text

- Press **T**.
- Click inside the frame.
- Type:

Welcome Back

Then adjust:

- Font
- Font size
- Weight
- Alignment
- Color

6. Create a button

- Press **R** to create a rectangle.
- Give it a suitable size, e.g. 320×50 .
- Set corner radius to 8–12.
- Add a fill color.
- Press **T** and place:

Login

over the rectangle.

Select both and use **Align horizontal and vertical centers**.

7. Add input fields

Create a rounded rectangle:

Email Address

Duplicate it with **Ctrl + D** and change the label to:

Password

8. Add an icon

You can use:

- Figma Community resources
- Icon libraries/plugins
- SVG icons

For example:

Welcome Back

Email Address	
---------------	--

Password	
----------	---

LOGIN	
-------	--

[Forgot Password?](#)

9. Learn Auto Layout

This is one of the **most important Figma features**.

Select your button or group of elements and press:

Shift + A

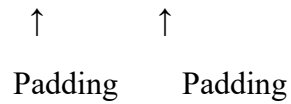

Auto Layout lets you control:

- Spacing
- Padding
- Alignment
- Responsive resizing
- Vertical/horizontal arrangement

For example:

Button

Login	
-------	--

10. Create Components

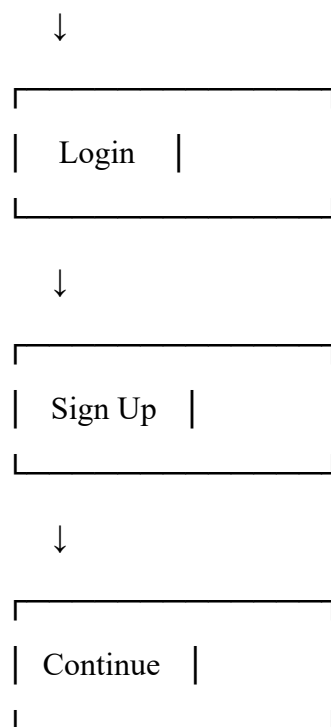

Select your button → **Ctrl + Alt + K**

This converts it into a **Component**.

You can then reuse the same button throughout your application.

For example:

Button Component

11. Create multiple screens

For example, create:

Screen 1 → Login

Screen 2 → Home

Screen 3 → Profile

Screen 4 → Settings

Each screen should be a separate **Frame**.

12. Create a prototype

Go to the **Prototype** tab.

Select the Login button and drag the small connection node to the Home frame.

Set:

Trigger: On click

Action: Navigate to

Destination: Home

Now click **Present** ►
